Typefaces
- Using 3 different typefaces works
- Maybe choose a different sans serif for the copy that feels more congruous with the other two typefaces
- Open up the leading a little bit in the body copy
- Adjust "Amrita Sher-Gil" in the header to be a little bit more readable

Legacy page
- Departure from treatment works and it is pretty subtle—could maybe be pushed further with more dramatic color and type treatment, but you don't need to overdo it either. The change in treatment definitely isn't a problem though

Triptych of images
- Fine to have them both scroll

Color
- White on light background is working
- Maybe adjust the colors on the menu—black text on orange feels a little harsh, but I like the idea of the sections changing color when you hover on them

Callout Text
- The amount you currently have is working—you don't have to add more

Overall good job! ☺
